JERROD BOLTON

Tempe, Az 85283 | GitHub: github.com/jerrodbolton

Professional Summary

Artificial Intelligence and Advancing Computer Science student with experience in recruitment outreach, technical instruction, IT procurement support, and AI project leadership. Explains technical concepts to new learners, coordinates with stakeholders, and uses data tracking to support organized work. Interested in applying this background to consultative technology sales and helping customers understand the value of AI and automation.

Technical Skills

Programming Languages: Python, JavaScript, HTML, CSS, Java
Frameworks & Technologies: Node.js, Firebase, REST APIs, Flutter, Bootstrap, Fusion 360 (3D Modeling), React, CustomTkinter
Cloud & Platforms: Google Cloud Platform (GCP).
Development Tools: GitHub, Visual Studio Code, Repli
Methodologies: Agile, Scrum, Version Control, Debugging

RELEVANT STRENGTHS

Recruitment and outreach | Technical presentations | Stakeholder communication | Procurement support | Data tracking and reporting | Team coordination | Customer service

---

EDUCATION

University of Advancing Technology – Tempe, AZ
Bachelor's Degrees in **Artificial Intelligence and Advancing Computer Science**
Expected Graduation: May 2027

CodeCrew Code School – Memphis, TN
Full-Stack Web Development Intensive | Graduate

- Spent 40+ hours per week in hands-on instruction, labs, and project-based learning covering HTML, CSS, JavaScript, and modern development workflows.
- Worked in collaborative, fast-paced environments designed to mirror real-world software engineering teams, with frequent code reviews, pair programming, and technical presentations

Microsoft Technology Associate Certificate - Introduction to Programming Using JavaScript (2022)

PROFESSIONAL EXPERIENCE

IT Procurement and Finance Intern | State of Arizona ASET – Phoenix, AZ
May 2026 - Present

- Support IT procurement, software licensing, and finance activities within a state government technology environment
- Assisted with invoicing and payment processing for over $3 million in IT service revenue across multiple state departments

Recruitment Coordinator | CodeCrew – Memphis, TN
April 2024 - January 2025

- Partnered with stakeholders to support program growth and outreach initiatives.
- Led beginner coding sessions, helping new learners start their journey in software development
- Used data tracking and reporting to improve recruitment strategies
- Strengthened communication and collaboration across teams

Host | The Memphian Hotel – Memphis, TN
September 2023 – December 2024

- Operated in a fast-paced, customer-facing environment requiring multitasking and attention to detail
- Strengthened teamwork, communication, and time-management skills under pressure

Software Engineer Instructor | Persevere – Memphis, TN
June 2022 – November 2023

- Taught software engineering fundamentals, including JavaScript, React, and web application development
- Mentored students on debugging, problem-solving, and real-world software workflows
- Collaborated with cross-functional teams to deliver consistent technical education programs

---

SELECTED PROJECTS

Animai Kingdom | AI Companion and Production Studio Project
Project Lead

- Develop an AI desk companion concept combining animal character personalities, voice interaction, and planned Raspberry Pi hardware integration
- Led a multidisciplinary student team across software, visual design, 3D modeling, marketing, and sound to plan and iterate on the product
- Coordinated tasks, timelines, and feedback to keep development aligned with the product vision

Internet of Things (IoT) Counter System
University of Advancing Technology

- Collaborated on an Arduino-based counter system, programming input handling and debugging hardware and software integration

VORTEXA | Local AI Desktop Assistant
Python and CustomTkinter

- Build a desktop interface for local language models with model switching, speech features, and short-term conversation memory
- Test model responses and refine the interface through debugging and iterative development

Full-Stack Web Development Projects
CodeCrew Code School

- Built responsive applications using HTML, CSS, JavaScript, and Firebase, including forms, data storage, and user interaction flows; collaborated using GitHub

AI Club Technical Projects
University of Advancing Technology

- Led beginner-friendly coding workshops using Python and JavaScript to teach core programming concepts
- Created small scripts and exercises to demonstrate logic, data handling, and problem-solving techniques
- Facilitated collaborative learning sessions encouraging teamwork and iterative development
